Take-home test:

Hi!   This take-home test is a part of our technical interview process. We want to respect your time and give you as many details as possible to keep the scope narrow.

Requirements:

- We don't expect you to create a pixel perfect web version of the mockup, but correctness of your solution matters.
- You can get the logo image from our website app.logdna.com
- Feel free to use any CSS preprocessor, but we ask that you not to use any component libraries like Bootstrap.
- You can use any JS framework if you think it's reasonable.
- You can leave the side navigation bar and the articles list non-interactive; just make sure there's an indicator of the active item.
- The header should be always attached to the top.
- The "Send Message" form should be always attached to the bottom.
- The "Send Message" form should send a message to the server and return the result to the client. In case of error, you should show feedback or indicate an error has occurred. It's up to you how and where to the error message.

Please feel free to ask additional questions if you need any clarification.

After you submit your solution please include a link to your source code, a Readme with instructions on how to run the code, and a link to the demo.
